

GREENFIELD SPECIALTY CONSERVATION & TURF

- All-purpose
- Fast establishment
- Superior performance in ponds & ditch banks

APPLICATION RATE

1.75-2 kg/100m², 3.85-4 lbs/1,000ft²

GERMINATION

7-21 days

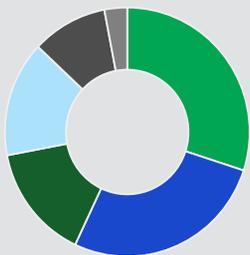

DESCRIPTION

GREENFIELD is the ideal "conservation" mixture. It can be used to provide excellent ground cover for land in a holding pattern, wildlife cover, erodible slopes and around pond and ditch banks. It can be left unmowed or cut 2 to 3 times annually. Once established, GREENFIELD requires little to no fertilizer. Intersperse some patches of wildflowers for an enhanced appearance. The combination of durable and persistent grasses with clover produces this symbiotic, long-lived, attractive and economical ground cover.

Will not tolerate mowing heights less than 5 cm.

MIX COMPONENTS

30%	Creeping Red Fescue
27%	Tall Fescue
15%	Perennial Ryegrass
15%	Richmond Timothy
10%	Kentucky Bluegrass
3%	White Clover
